

Software Developer

Backend and VOIP oriented development

ALLOcloud (www.allocloud.com) is a fast growing technology firm providing advanced cloud telephony and collaboration solutions to organisations striving for sustainable productivity and Customer satisfaction improvements.

Job description:

You will contribute to maintain and improve our cloud-based IP telephony platform. You will develop new products, applications and APIs, following the latest technologies, protocols and tools.

You will use the following stack: Python – PostgreSQL – Asterisk – Network protocols (SIP, HTTP, ...)

Required expertise:

- You have a good experience in backend development, ideally Python
- You understand and work with network protocols (from bottom to top)
- You have experience with SQL, ideally PostgreSQL
- You are familiar with Linux environments, ideally Debian
- You love working on distributed redundant architectures and services load-balancing

Additional assets:

- You have an experience in front-end development. You already worked with React
- VOIP concepts and SIP protocol have no secrets for you
- You are familiar with FOSS, you contribute to Open-Source projects
- Working with asynchronous patterns is not a big deal for you
- Experience with Ansible

Candidate profile:

Curious about technology, you love trying new things while staying very pragmatic in your technological choices, aiming at stable and business-oriented solutions. You have excellent communication skills. You love learning from your colleagues as much as sharing your own views with them and creating the necessary documentation.

Languages:

Dutch or French
English

Package:

Salary to be negotiated
Company car with fuel card
Laptop & Phone
Meal tickets
DKV medical insurance
