

## **Telecom System Administrator**

ALLOcloud ([www.allocloud.com](http://www.allocloud.com)) is a fast growing technology firm providing advanced cloud telephony and collaboration solutions to organisations striving for sustainable productivity and Customer satisfaction improvements.

### **Job description:**

You will contribute to maintain and improve our cloud-based IP telephony platform.

Your main tasks will be (for our cloud infrastructure & internal IT):

- Setup, configuration and testing of the company systems for various operational needs
- Installation and upgrades of the company system components
- Develop and maintain system installation and configuration procedures
- System monitoring
- Support and troubleshoot
- Bug fixing in close cooperation with the development team
- Research and recommend innovations with regards to the company system setups

### **Technical profile:**

Profound knowledge in Linux (ideally Debian)  
You have a good knowledge of networking & firewalls  
You have experience with SQL, ideally PostgreSQL

Experience with a mix of the following:

VMware  
Veeam  
Monitoring tools  
Scripting  
Ansible  
HA Proxy

### **Additional assets:**

Knowledge of Asterisk  
Experience with VoIP and/or SIP

**Candidate profile:**

Curious about technology, you love trying new things while staying very pragmatic in your technological choices, aiming at stable and business-oriented solutions. You have excellent communication skills. You love learning from your colleagues as much as sharing your own views with them and creating the necessary documentation.

**Languages:**

French or English

**Location:** City Lake Center Lac 2, Avenue du Dollar, Tunis 1053

**Package:** to be negotiated
